

Atlantic Coast Recycling Expands Recycling Program to Include Food and Beverage Cartons

PASSAIC, NJ – Atlantic Coast Recycling announced today that they will now be accepting food and beverage cartons at their Passaic location. The popular cartons include both aseptic shelf-stable rectangular shaped cartons, as well as the familiar gable top, refrigerated cartons.

The expansion is part of a national initiative through the Carton Council. Formed by four leading carton manufacturers: Elopak, Evergreen Packaging, SIG Combibloc, and TetraPak, the Carton Council members have joined forces to help advance improvements to carton recycling infrastructure across the country. By promoting recycling technology and local collection programs, the Carton Council will limit the number of cartons that become waste.

“We are excited that Atlantic Coast Fibers is now on board with carton recycling, providing enhanced recycling opportunities to its customers”, says Jason Pelz, Vice President of Recycling for the Carton Council. “Atlantic Coast Fibers is demonstrating its commitment and leadership by offering this new standard for recycling programs.”

To recycle cartons, municipalities with “Dual Stream” programs will advise their residents to simply place the cartons with their commingled containers. If the municipality collects single stream recyclables, residents simply include the cartons with their single stream recyclables. In either program, for best recycling results, do not flatten cartons. Caps may remain on cartons.
